Seeking Summer 2026 Internship Opportunities in Software & AI/ML Engineering

EDUCATION

IIIT Vadodara – ICD

2023 – 2027

B.Tech in Computer Science and Engineering

CPI: 8.4/10

Coursework: Data Structures & Algorithms, OOP, DBMS, Software Engineering, COA, Operating Systems, Computer Networks, Machine Learning, Image Processing, Artificial Intelligence

Vidhya Shri Public School, Didwana (RAJ)

2023

Class XII (RBSE) – Science Stream

Percentage: 94.8%

EXPERIENCE

Machine Learning Intern at Infosys Springboard

Dec 2025 - Jan 2026

- Architected a real-time full-stack web application CrptoPulse for cryptocurrency price analysis and forecasting using React, Python, FastAPI, MongoDB and Binance api.
- Achieved **91-99% accuracy** using **LSTM** and **Gradient Boosting Algorithms** accross multiple coins price data.
- Supports 30+ currencies with there real-time historical and future price analysis with technical indicators.

PROJECTS

Postal Automation | *Streamlit, Python, OCR, MongoDB*

Oct 2025 – Dec 2025

- Designed an end-to-end automation pipeline (Image Acquisition → Preprocessing → DAB Detection → OCR → Entity Validation → Auto-Correction) to extract destination address from postcard images.
- Implemented a custom multilingual **OCR** engine using **R-CNN Network & CTC Loss** for handwritten text recognition for Cityname and Pincodes with average **98% accuracy** across all language models.
- Integrated a knowledge graph-based validation module using **MongoDB** to increase accuracy for PIN and City.

Dynamic Ensemble for Plant Disease Detection | *Python, TensorFlow(Keras), NumPy*

Nov 2025

- Developed **Mixture of Experts** deep learning system using **Python** and **TensorFlow (Keras)** to detect plant leaf diseases with more than **97% accuracy**.
- Engineered a custom **Gate Network (CNN)** that dynamically assigns weights to **VGG16, VGG19, InceptionV3, and ResNet101** predictions based on input image patterns.
- Integrated **Explainable AI (LIME)** to highlight disease-relevant leaf regions, ensuring model transparency and trust for real-world agricultural applications.

Hybrid Movie Recommender System | *Python, Scikit-learn, NLP, Next.js, MongoDB*

Aug 2025

- A Hybrid Movie Recommendation System using Collaborative Filtering and Content-Based Filtering.
- Engineered a recommendation engine using **Bag of Words (BoW)** to vectorize movie metadata and applied **Cosine Similarity** to rank films with the highest contextual and keyword relevance.
- Developed a model that analyzes user viewing history and interaction patterns to identify similar user profiles and predict movie preferences based on collective behavioral data.

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript, SQL

Backend & Systems: Node.js, Express.js, REST APIs, WebSockets, JWT

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Databases: MongoDB, MySQL

ML & Data: PyTorch, TensorFlow, OpenCV, Scikit-learn, Pandas, NumPy

Tools: Git, GitHub, Postman, VS Code

ACHIEVEMENTS

Certifications: Infosys Springboard's ML, DL, NLP Developer, NVIDIA Deep Learning.

Coding Profiles: LeetCode Rating (1540) · CodeChef 2-Star (1425).
